

# Value Stream Mapping / Value Stream Design

-Streamline your Material and Information Flow

Date:  
1 Day

Event language:  
Chinese

Qualification for Production Managers, Production Team Leaders, Production Planners, Logistics/Material Managers, Kaizen Managers

## Benefit for your daily business.

- > Identify wastage by the systematic analysis of the value stream
- > Understand all components for simple application and immediate implementation
- > Obtain confidence for the application and implementation in your own working environment
- > Learn, understand and practice the most powerful tool to map current process and to design future "State-of-the-art" concepts.

## Why that Event?

The processes, material and information flows become more and more complex. Transparency, especially in the operations with a wide range of in-house production is often missing, therefore, it is difficult and risky to start a isolated optimization without understanding the whole Value Stream.

Value Stream Mapping (VSM) is a fantastic tool to document/map both material and with information flow on paper-in a pragmatic and standardized way. Pain points become obvious. Problems in cycle-times, WIP's through put time will be easily recognized. The subsequent discussion of the "To-be-Status" of your Value Stream is called Value Stream Design (VSD) and provides clear ideas "Flow" and "Where" to start with the optimization. The common results are the reasons why VSM/VSD became one of the most important analyzing tools in manufacturing optimization.

## AGENDA

Start at 08.30 am, End at 05.30 pm

- > VSM training, general introduction
- > Factory Exercise - make out a Value Stream Mapping for a real product according to current status
- > Team work and present the output, discussing of weak points
- > Team work about future streamlined value chain (Value Stream Design)
- > Some good examples about Value Stream
- > Final discussion and leave talking
